Initial configuration settings The program gives you the possibility to set up several initial parameters. You can enter your name and provide information about the number of cigarettes that you used to smoke per day, number of cigarettes that are in a pack/carton, cost of a pack, and date/time when you quit smoking. Get all sorts of reports Based on the information given at the beginning, the application is able to show quitting statistics about the time (in years, months, weeks, days, hours, minutes, and seconds), number of days since you gave up smoking, saved money, and saved life. Other important features worth being mentioned enable you to keep personal milestones, store information about the date when your friends stopped smoking, as well as copy the stats to the clipboard so you can quickly paste data into other programs. Configuration settings Quit Keeper lets you set up the time used for calculating the life saved per cigarette and assign a hotkey for pasting the statistics into other windows. What's more, you can run the utility at Windows startup, edit the message containing the statistics about smoking, preview the message in a dedicated panel, as well as alter the color used for displaying the text, anniversary, and other GUI elements. Needs improvements On the downside, Quit Keeper hasn't been updated for a long time and it shows. You can add entries in the built-in calendar only up to a preset year (2000) so if you quit smoking after that period, the tool is useless. The GUI looks a bit outdated and needs a facelift to make it easier to work with. Final words All things considered, Quit Keeper delivers a simple software solution for helping you record various aspects since you last smoked a cigarette, namely for how long you have quit and how much money you have saved. What is the price of a pack? The only way that you can calculate how much a pack of cigarettes costs you is to know the quantity of cigarettes in a pack, their price per pack and the number of packs in a carton. This information is stored in the configuration settings, so once you have updated the existing data, you won't have to go through the process every time you use the utility. To increase the value of a pack, you can just add more packs
