Now, I know, reducing image noise and sharpening details aren't your only priorities, but they're often very important, especially for certain effects. I'm confident you could get a decent-looking result from a program that didn't offer such controls and features—but not from one created by Adobe. This AI editing tool is still very young, but the results are extremely impressive. It's a great start, thanks to Adobe's commitment to improving Apple's efforts at AI. Creative Cloud will have to continue working on the system to make it more user-friendly, and ensure that it's more AI-driven. For now, it's definitely a nifty feature. Adobe includes print, web, and video services. The company claims the app offers 40 automatic features, including lens corrections, auto-detect edges, exposure, color, red-eye, and sharpening effects. It also has tools for aligning images and cropping. In addition, it has a variety of image editing tools, including ones for removing blemishes, aligning images, exposure, and sharpening. If you've been with Adobe for a while, you probably use the older version of Lightroom. But if you're looking for a fresh, completely new experience, then you'll probably want to process your photos in this software. But that's not the only reason why you should upgrade to Lightroom 5. This version provides several new features that I'm hoping will mean a more successful application for you. Here are a few other features that make the app stand out: Free apps have no in-app sales, the developer has limited the number of person-to-person share links to 10, and users must agree to terms of use and the Privacy Policy before they begin using it. You can see which devices you can sync with, and Adobe creates a backup of your entire project when you sync.

**Lighting:** Although it's not always essential, you can use the Lighting panel to make your final product more appealing. This feature allows you to control your exposure, highlights, shadows, and other details.

**Gradient tool:** If you have some graphics you want to highlight or something with a standard color, the Gradient tool helps you achieve that. Choose the desired color, choose the color you want to use for the gradient, and set percentage. You can manually select the direction you'd like to place the gradient. You can't edit the number of gradient bars.

**1st levels:** The 1st Levels feature smoothes out a selection. This allows you to choose colors and make them more neutral for more practical applications. The Color panel is the major thing that offers this.

**Color Mixing:** This feature helps you to change the colors you've chosen for other objects. If you want to make your background black, you can change the colors you chose to blend with black. With this tool, you can get creative and make your background as black as you want it.
